SIMPLE
MAINTENANCE

Using proven technology that is reliable and easy to operate, the Ultra series conquers the most stringent semiconductor demands at a low cost compared to competing technologies.

It's a ground-breaking gas analysis solution that combines exceptional performance and transformational specifications with our proven technology and expertise.

Part of our SERVOPRO range of innovative safe area analyzers, the Ultra series is easy to use and maintain, with minimal calibration and service requirements.

With fast response times, low detection levels, and ease of use, at a significantly lower cost, the Ultra Series is a simply better choice for UHP gas analysis.

DF-560E NANOTRACE ULTRA

Providing an industry-leading lower detection limit of 45ppt, this Coulometric analyzer offers exceptional trace-level O₂ measurements.

DF-750 NANOTRACE ULTRA

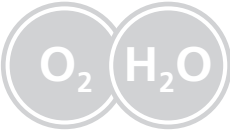

With an outstanding lower detection limit of 55ppt, this laser moisture analyzer significantly improves on the standard version's 100ppt.

DF-760E NANOTRACE ULTRA

A combined Coulometric and Laser Moisture analyzer delivering dual measurements for O₂ and moisture with our unmatched lower detection limits.

NanoChrome ULTRA

The Ultra brings lower detection limits for multiple gases down as low as 100ppt, compared to 500ppt on the standard model.
